

Earn Free Money On the Internet **What To Do if You have NO Budget**

If you fit the “No Budget” group of people and can not commit to \$11.50 per month for 2 or 3 months, this PDF will show you a couple of things you can do to build up some funds.

Unfortunately, It does take some funds to be able to buy into programs that can earn you monthly residual income. Also, sometimes it takes 3 to 5 months to learn the skills needed to find and refer people who will be paying you the commissions.

But if you have the time, patience, and the determination to become successful, there are some things you can do on the internet to accomplish your goals.

This PDF outlines a few ways to earn free money.

1. Bitcoin Faucets - I have joined a few bitcoin faucets and one that I keep active on my computer is found at <https://freebitco.in/?r=347805>

You join this Faucet, then login and keep the program active in one window and every hour, you click a link to get a few small bits of BitCoin called Satoshi's At the present time, 30,000 satoshis is valued at a bit less than \$5.00 USD so it can take a while to build up some funds this way but it is possible. There are other faucets that you can join to do the same thing with varying time intervals. DO NOT JOIN ANY THAT YOU HAVE TO PAY PAY FEES.

2. Pay To Click and Pay for Surveys There are sites like NeoBux and ClickSense where you can get paid for taking surveys. This sites are not as good as they have been in the past and I don't have referral links to join them.

3. Rush Card. Free Visa Debit Card for US residents

This is a neat way to get some free money if you live in the US. For new customers, Rush Card will deposit \$30 on your new account when you load your first \$20 on the card. Full explanation is at <http://Ez-As-ABC.com/JoinRushCard.pdf> Also, when your friends join they get the same deal and Rush Card will add \$30 to your Card as a Finder Fee. You can earn up to \$600 per year doing this.

About Dave Fullmer

Dave Fullmer is a retired technician who worked 46 years on the electrical circuitry of automated manufacturing equipment. Since 2006 he has been doing various marketing programs on the internet with some successes and some failures. He loves to share some of what he has learned so that others don't have to go through the trial and error frustrations of trying to learn by themselves
